## SUPPLEMENTARY LIST OF

## ROSES

## To Our Catalogue of 1922

In order to have a complete collection of Roses, we grow practically every variety of merit, both new and old.

We offer in the following list, Roses not listed in our Rose Catalogue. Some of these varieties are of American origin, and the others were introduced by European Rose specialists within the last two years, and imported by us from the introducers.

PRICES.- Owing to the demand for these new Roses, and inasmuch as our stock is limited, no reduction can be given on quantities ordered.

## Souvenir de Claudius Pernet

J. PERNET-DUCHER, 1920

The introducer writes as follows: "A most vigorous grower of erect, branching habit; beautiful brilliant green foliage; few thorns; long-pointed buds of exquisite shape, carried on long, stiff stems. Very large, full flowers with elongated deep petals, beautifully formed. Color, most striking sunflower-yellow, deeper in the center, without any other color blending in it. A continuous bloomer. The color of the flower keeps absolutely without fading, even on the warmest days. This wonderful variety is different from all other yellow roses ever sent out."

We have observed this Rose last year in our nurseries and cannot but state that M. Pernet did not over estimate the good qualities in above description. We can only add that we do not hesitate to state its superiority as to beauty and hardiness over all new varieties in existence. This Rose will take a foremost place in every garden. It was awarded the Gold Medal at the Paris Rose Show, Bagatelle Rose Show, and Antwerp Rose Show in 1920.

Our stock is limited. The plants are strong, fieldgrown, low budded. Price, this spring, $\$ 5$ each.

## Standard or Tree Roses

These ornamental Tree Roses are necessary for the completion of a Rose-garden. They relieve the flat appearance of all bush Roses together, and give the flowers a certain individuality.

A word of explanation about our Standard Roses will be in place here. We wish our patrons to understand clearly why our Tree Roses are greatly superior to the one-time imported stock. They should, in no case, be confused or compared, as the latter often arrived with some of the roots more or less dried out, so that the sap was not circulated freely enough up the long stem and through the head, which eventually died as a direct result.

After years of disappointment from this cause, we decided to raise our own Tree Roses, so that now we bud and grow the plants sent out from our nurseries. So profitable has been the result that our Roses make a fine, vigorous growth, enabling them to withstand hard weather and annually produce a better display. Another thing we wish to point out is that we select only those Roses that grow best as Tree Roses, while in most other cases varieties are indiscriminately used for this purpose, often with dire results.

It is necessary to give Standard Roses some support, and a stake about the same thickness as the rose-stem should be used. This should be fixed on the south or sunny side, in order to afford some protection to the stem from the heat of the sun.

Our stock is budded on the extremely hardy Rugosa stems, and we can supply strong, field-grown plants.

## Price, \$3 each, except where noted
